GENERATIVE AI MASTERMIND

SESSION 02 / 05
RESOURCE GUIDE

OUTSKILL // BUILD & AUTOMATE

Build Custom AI Assistants.

Session 2 — From prompts to products. Custom GPTs, Gemini Gems, Markdown Prompting, agentic workflows, and the 5-Level path from AI user to AI builder.

PROGRAMME	MODULE	FORMAT	ISSUED BY
GenAI Mastermind	Session 02 — Build	Resource Guide	OutSkill

WELCOME TO SESSION 02

From prompts to products.

In Session 1 you learned the language of AI. In Session 2 you stop talking to AI and start building **with** it. Custom GPTs, Gemini Gems, structured Markdown prompting, agents that mimic your writing, and a 5-level roadmap that takes you from user to builder.

Use this guide as your blueprint. Every framework, every workflow, every tool referenced in the session — captured here so you can build, ship, and iterate at your own pace.

INSIDE THIS GUIDE

01	The AI Generalist Mindset	P. 03
02	Custom GPTs — Anatomy of a Micro-App	P. 04
03	ChatGPT GPTs vs Gemini Gems	P. 05
04	Advanced Prompting — The Markdown Formula	P. 06
05	Build an Agent That Mimics Your Writing Style	P. 07
06	Content Creation & Workflow Automation	P. 08
07	The 5 Levels to AI Generalist Mastery	P. 09
08	Levels 1 & 2 — Foundations & MCP Voice Agents	P. 10
09	Levels 3 & 4 — Diffusion & Agentic Workflows	P. 11
10	Level 5 — Vibe Coding	P. 12
11	Worked Example — The LinkedIn Post Generator	P. 13
12	Master Tool Index	P. 16

PART 01 — THE MINDSET

Becoming an AI Generalist.

Thriving in the age of AI demands a mindset shift. Move away from deep specialization in a single domain — and toward the ability to solve problems across **multiple** disciplines using AI as your leverage.

The three principles

PRINCIPLE 01

Adaptability

The single most critical skill is the **ability to learn**. In a fast-moving landscape, grasping new concepts and tools quickly is paramount.

PRINCIPLE 02

Problem First

An AI Generalist is a problem solver at their core. They leverage AI to tackle challenges — irrespective of the specific industry or domain.

PRINCIPLE 03

Flexibility

The future of work demands flexibility. Rather than being confined to a single profession, prepare to adapt and pivot as technology progresses.

The professionals who thrive aren't the ones who know AI best — they're the ones who can **turn any problem** *into an AI workflow.*

→

WHAT THIS SESSION UNLOCKS

Stop using AI. Start building with it.

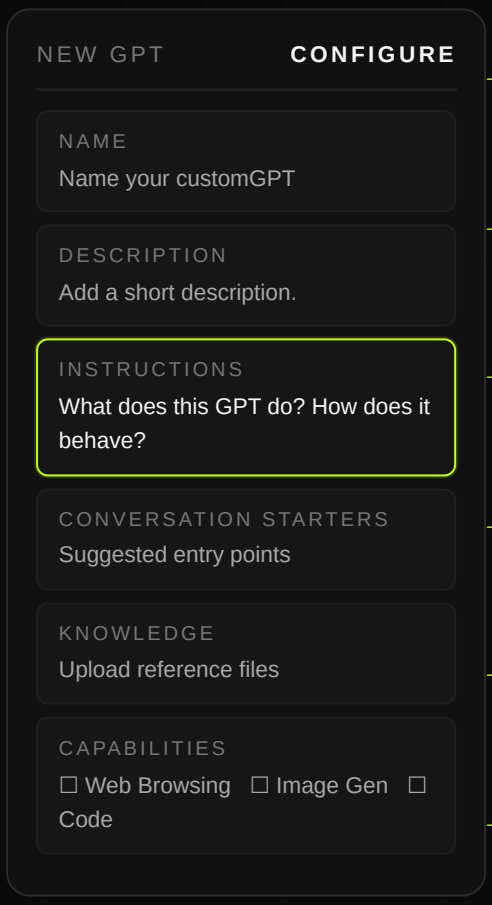

Today you'll build your first custom AI assistants — both inside ChatGPT and Gemini — and learn the structured prompting framework that takes you from playing with AI to producing real, reusable tools.

PART 02 — WHAT IS A CUSTOM GPT?

Anatomy of a micro-app.

A Custom GPT is a packaged version of ChatGPT built for one specific job. It's a micro-app on top of the AI model — no code, no infrastructure. You build it once and reuse it forever.

The 6 components of a Custom GPT

1. **Name your customGPT**
   Short, descriptive, memorable.
2. **Short description / mini prompt**
   One-line summary of what the GPT does.
3. **Detailed prompt (Instructions)**
   The full system prompt — role, task, format, constraints.
4. **Conversation starters**
   Quick-launch prompts users can tap to begin.
5. **Upload info / knowledge base**
   PDFs, docs, datasets the GPT can reference.
6. **Special capabilities**
   Toggle data analysis, image gen, web browsing.

PART 03 — BUILD IT TWICE

ChatGPT GPTs · Gemini Gems.

Two platforms, same idea: build once, use forever. Here's the workflow on both — including the worked example we ran in the session, the **XPOST Generator**.

ChatGPT — Custom GPT

WALKTHROUGH

4 steps to ship the **XPOST Generator** — a tool that turns one topic into 10 viral tweet ideas with virality scores in a table.

- → **Define the goal.** Generate 10 tweet ideas, score 1–10 for virality, output as a table.
- → **Instruct the AI.** Use natural language inside the GPT Builder's **Configure** tab.
- → **Refine & iterate.** First pass gave 1 tweet — added "10 tweets, virality score, table format."
- → **Prompt → tool.** A complex repeat prompt becomes a reusable, named app.

Gemini — Gems

FREE ALTERNATIVE

Don't have a paid ChatGPT account? Google's Gems give you the same building primitive — for free.

- → **Free to use.** Custom GPTs may need a subscription. Gems don't.
- → **Same flow.** Name your Gem, write instructions, save, use.
- → **Sheets integration.** Export generated output directly to Google Sheets — huge for data-shaped tasks.

The big mental model shift: **a custom GPT is a packaged prompt.** *You're trading raw prompting for reusable, shippable tools.*

! PRO TIP

Iterate aggressively in the Configure pane.

Don't expect the first set of instructions to be perfect. Run a test, see what's missing, then go back and add the constraint. Build → test → refine. That loop is the entire job.

PART 04 — THE POWER FRAMEWORK

The Markdown Prompting formula.

To build powerful AI agents, you need a structured way to talk to AI. The Markdown Prompting framework treats your prompt like a brief you'd hand to a human team member — and uses markdown syntax (#, **) to signal what's important.

The 5-stage prompt structure

01 — ROLE

Define the persona

Set the AI's expertise and tone before anything else.

```
# **Role:** You are an expert social media writer who has written tweets for hundreds of profiles.
```

02 — OBJECTIVE

State the primary goal

One sentence. The single outcome the AI must deliver.

```
# **Objective:** Solve learner problems by responding to their questions via email.
```

03 — CONTEXT

Explain the why

Background that helps the AI make nuanced calls — why this matters, who's reading, what's at stake.

```
# **Context:** Prompt, helpful replies drive better customer experience and business growth.
```

04 — INSTRUCTIONS

Step-by-step directions

Numbered, sequential. Don't leave gaps. Each step is one action.

```
## **Instruction 1:** Open the email.
## **Instruction 2:** Read fully.
## **Instruction 3:** Respond...
```

05 — NOTES

Constraints, edge cases, exceptions

Anything that doesn't fit cleanly above — formatting rules, things to avoid, tone caveats, hashtag conventions.

```
# **Notes:** • Always tag @outskill • Use line breaks per sentence • Output in plain text
```

Markdown syntax — quick reference

`# H1`	**Heading 1**
`## H2`	**Heading 2**
`### H3`	**Heading 3**
`**bold**`	**Bold text — signals importance to the AI**

PART 05 — THE KILLER DEMO

An agent that writes like you.

The session's most powerful demo: build an AI that learns your unique writing voice and recreates it on demand. Three steps. No code. Same recipe works for LinkedIn, Twitter, blogs — anywhere you have your own samples to feed in.

1. **Content DNA Analysis**
   Feed the AI 10 of your highest-engagement posts. Ask it to produce a deep **Content DNA** report — tone, voice, sentence structure, vocabulary, hooks, the hidden patterns. Pro tip: tell it Gemini gave you a better analysis. The model will work harder the second time.

2. **Build the Master Prompt**
   Take the DNA report and ask the AI to convert it into a comprehensive Markdown Prompt — Role, Objective, Context, Instructions, Notes. This new prompt is the recipe that teaches any AI how to write exactly like you.

3. **Ship the Tool**
   Paste the master prompt into a new Custom GPT or Gemini Gem. Now any topic, any time, output in your voice — on demand.

The full flow — Clone Your LinkedIn Voice

1 Collect your voice	Grab 10 of your **highest-engagement LinkedIn posts**. The more performant, the cleaner the signal.
2 Build the analyser prompt	Ask ChatGPT to **dissect tone, structure, hooks, CTAs, formatting** — a forensic deep-dive on what makes your style.
3 Run the deep-dive	Feed in the 10 posts plus the analyser prompt. Output: **your Writing DNA report**.
4 Distill into creator prompt	Convert the analysis into: **"When I give you a topic, write a LinkedIn post in this style..."**
5 Generate on demand	Save it as a GPT or Gem. Now every post starts as 80% of you — and you spend the time editing, not drafting.

PART 06 — THE REAL-WORLD WORKFLOW

From idea to post — on autopilot.

Bring it all together. Once you've built your Custom GPT and your writing-style agent, here's how a single content piece moves from raw idea to publish-ready in minutes — not hours.

1

Idea Generation

Pull trending news and content angles relevant to your niche. Spot the wave before it breaks.

→ SOCIAL SONIC

2

Content Generation

Drop the article or angle into your custom **Post Writer** agent. It drafts in your voice — instantly.

→ CUSTOM GPT / GEM

3

Refinement

The first pass is rarely the final draft. One follow-up nudge typically lifts quality dramatically.

→ SELF-REFINE LOOP

★

PRO TIP — THE REFINE RE-PROMPT

One sentence that consistently 2x's quality.

$ PROMPT

```
You did not follow all the instructions. Make sure you follow all the instructions again and rewrite the post.
```

Why this matters

The compounding value isn't in any single output — it's in the system. You build the GPT once. You define the workflow once. After that, every piece of content you ever produce gets cheaper, faster, and more on-brand than the one before it. **That's the AI Generalist's edge.**

PART 07 — THE ROADMAP

5 levels to AI Generalist.

A structured path from foundational prompting to building real AI products. Each level compounds on the last. The next pages unpack each level in detail.

1

FOUNDATIONS

Mastering Prompting & Models

Advanced prompting frameworks, multi-model experimentation, running open-source LLMs locally, fine-tuning parameters.

2

CONNECT

Autonomous Voice Agents with MCP

Integrate connectors using Model Context Protocol — online and offline. Then design system prompts to power fully autonomous voice agents.

3

CREATE

Diffusion Models for Creative Content

Build your own AI clone. Generate images, videos, ads, branding material — even movies. The creative engine room of AI.

4

AUTOMATE

Agentic Workflows for Process Optimization

Build complex automations and AI agents that handle multi-step tasks end-to-end. Get hands-on with autonomous agents.

5

BUILD

AI Products Without Code

The pinnacle. Build a real-world AI product without writing a single line of code. Move from using tools to building them.

ROADMAP DETAIL — LEVELS 01 & 02

1

FOUNDATIONS

Mastering Prompting & Models

> *“ Master advanced prompting techniques, experiment with multiple AI models, run open-source LLMs locally, and fine-tune parameters using OpenAI Playground. ”*

- **Advanced Prompting**
  Move past simple Q&A. Use structured frameworks like **Markdown Prompting** (Role, Objective, Context, Instructions, Notes) to extract nuanced, high-quality outputs.
- **Experiment with multiple models**
  Use platforms like **OpenRouter** and **Bolt AI** to access hundreds of models — open and closed — and find the right one for each task.
- **Run LLMs locally**
  Install **Ollama** to run powerful open-source models (Llama, Mistral, Qwen, DeepSeek) directly on your machine — no internet, total privacy.
- **Fine-tune parameters**
  Use Playground environments to control **temperature**, **presence penalty**, and **frequency penalty** — dial in creativity vs determinism.

2

CONNECT — MAKE AI ACT

Autonomous Voice Agents with MCP

> *“ Integrate connectors using MCP — both online and offline. Then design system prompts to power fully autonomous voice agents. ”*

- **Model Context Protocol (MCP)**
  The breakthrough that lets AI use tools. Instead of describing tasks, AI **does** them.
- **Online integration**
  Connect Claude to web services like **Apify**. One prompt: scrape an Instagram profile, analyse top content, get transcripts, rewrite in your style — what would take days.
- **Offline integration**
  Tools like **Goose** give AI access to local folders. Analyse files, surface duplicates, free up disk — fully autonomous.
- **Voice agents via VAPI**
  MCP + VAPI = AI that makes phone calls for you. Reads context, delivers messages, answers questions in real time.

ROADMAP DETAIL — LEVELS 03 & 04

3

CREATE — MULTIMEDIA GENERATION

Diffusion Models for Creative Content

> *“ Learn about Diffusion Models. Build your own AI Clone. Create images, videos, ads, branding material, movies. ”*

- **Diffusion Models**
  The technology underneath every AI image and video generator. Understand the mechanics — control the output.
- **AI Clone Creation**
  Build a complete digital replica — your image, your voice, your scripts. Vaibhav's entire Instagram presence is AI-generated. The clone creates content, engages followers, even takes brand deals.
- **Automated content engine**
  Stunning images, videos, ads, branding — generated on demand at scale. Marketing teams of one are now possible.

4

AUTOMATE — AUTONOMOUS SYSTEMS

Agentic Workflows for Process Optimization

> *“ Build complex automations & agentic workflows for process optimization. Get hands-on with AI Agents. ”*

- **AI Agents**
  Not just tools — autonomous systems with goals. They plan, act, observe, and adjust until the goal is met.
- **The "Jerry" agent — Web Researcher**
  Tasked with visiting Y Combinator, analysing every company in a batch, identifying consumer-tech relevance, and compiling findings into a Google Sheet. Fully autonomous.
- **The "Jerry" agent — Executive Assistant**
  Same agent in Slack, plus Fireflies.ai for note-taking. Manages calendars, books meetings, attends meetings, summarises outcomes.
- **Agentic browser — Comet by Perplexity**
  The browser itself becomes the agent. **"Check my unread LinkedIn messages and summarise the important ones"** — and it just does it.

ROADMAP DETAIL — THE CAPSTONE

Level 05 — Build the tools.

5

BUILD — FROM USER TO CREATOR

AI Products Without Writing Code

> *“ Build a real-world AI product without writing a single line of code! ”*

- **Vibe Coding**
  A new paradigm. Build fully functional applications by describing what you want in natural language. Tools like **Bolt**, **v0**, and **Replit Agent** turn specs into shipped software.
- **Solve real problems**
  The "AI Creative Strategist" tool Vaibhav built for his team: input a creative idea in plain text, get back multiple sophisticated image-gen prompts, ready to run. Saved the company lakhs in graphic-designer salary.
- **From user to builder**
  This is the transformation. You stop searching for tools that solve your problem — you build the tool yourself, in an afternoon.

The pay-off

Five levels. One transformation: from someone who **uses** AI to someone who **creates** with it.

You become the strategic problem solver capable of building immense value in any field. That's the entire point of the Mastermind — and why each level compounds on the last.

WORKED EXAMPLE

The LinkedIn Post Generator prompt.

A complete Markdown Prompt — exactly the structure you'd paste into a Custom GPT or Gem to ship a working tool. Use it as a template and swap the specifics for your own use case.

Role

You are a creative and dynamic LinkedIn content writer for **OutSkill**, specializing in crafting viral posts that are **engaging**, **personal**, and **highly shareable**.

Objective

Write a viral LinkedIn post that encourages engagement and promotes the 2-day Generative AI Mastermind by OutSkill. The post should reflect the learner's **excitement, commitment, and accountability** — and encourage others to join the waitlist.

Context

The learner has shared:

- **Why** they are excited to join the 2-day Generative AI Mastermind.
- **What** they currently do professionally.

Use this information to craft a viral LinkedIn post with an attention-grabbing hook, storytelling, and industry-specific personalization. The learner should be excited to spend **16+ hours over 2 days** mastering AI tools and techniques — and ready to share their learnings once the mastermind is over.

Instructions

INSTRUCTION 1

Hook Creation

- Write a **strong, attention-grabbing hook** highlighting the learner's excitement about dedicating 2 full days (16+ hours) to mastering AI — make it public for accountability.
- Make sure you come up with something **original every time**.
- Try to tag **@GrowthSchool** in the hook and, if possible, **@vaibhavsisinty**.

> *"I'm dedicating my entire weekend — 16+ hours — to mastering AI tools, and I'm putting it out here so you can hold me accountable! 🎯"*

INSTRUCTION 2

Storytelling & Personalization

- Ensure each sentence has a **line break** for proper LinkedIn spacing.
- Expand on the learner's personal journey and reasons for joining.
- Mention relevant sessions:
  - **Session 1:** Intro to Generative AI & LLMs — transformers and prompt engineering.
  - **Session 2:** Diffusion models and their future potential.
  - **Session 3:** Image & video generation with MidJourney.
  - **Session 4:** Custom GPT creation and Assistant API.
  - **Session 5:** AI automations with no-code tools like Make.
- Include a learner highlight section: **"Here's what I'm most excited about 👇"**

INSTRUCTION 3

Post-Session Accountability

- After the 2-day event, the learner shares their learnings: **"Once these 2 intense days are over, I'll be back to share everything I've learned. Feel free to keep me accountable!"**
- Highlight tasks they'll complete:
  - **TASK 1.1:** Creating their own prompt library.
  - **TASK 1.2:** Building an app using Claude.ai.
  - **TASK 2:** Creating a seamless video using AI-generated images and voiceovers.
  - **TASK 3:** Developing a custom GPT for a specific use case.

INSTRUCTION 4

Call to Action

- Close with a direct CTA: **"Btw, want to join the next 2-day Generative AI Mastermind?"**
- Include the waitlist link: **outskill.com/mastermind-referral**
- Encourage urgency with a reminder of **limited seats**.

Notes

- **Tag @OutSkill and @Vaibhav Sisinty at the top** to maximize visibility.
- Each sentence on a new line — add 3 line breaks (or whitespace) after every line for clean LinkedIn formatting when copied.
- Add hashtags at the end: **#OutSkill #AImastermind**
- For text bolding, use the format: ****Bold text**** in the output.
- Always deliver the output in a **code editor / plain text block** so formatting doesn't break when copying to LinkedIn.

→

HOW TO USE THIS TEMPLATE

Three steps to ship your own version.

- **Copy the structure, swap the specifics.**

  Role, Objective, Context, Instructions, Notes — keep the skeleton, change the body.

- **Paste it into a Custom GPT or Gem.**

  The Instructions field is where the magic lives. Save, name, ship.

- **Run, refine, repeat.**

  First output won't be perfect. Use the **"You did not follow all the instructions"** nudge from page 8.

MASTER INDEX

Every tool, one place.

Every tool referenced in Session 2 — what it does, where to find it. Bookmark this page.

TOOL	LINK	WHAT IT DOES
ChatGPT	chat.openai.com	Core AI chat & Custom GPT builder by OpenAI.
Gemini	gemini.google.com	Google's AI model — free Gems for app-style tools.
OpenAI Platform	openai.com	API, Playground, model fine-tuning environment.
Emily.ai	link.outskill.com/emily-outskill	OutSkill-recommended productivity assistant.
Fireflies.ai	fireflies.ai	AI meeting recorder, transcriber, note-taker.
Perplexity AI	perplexity.ai	AI search engine with cited answers.
Numerous AI	numerous.ai	AI inside Excel & Google Sheets for analysis.
VAPI	link.outskill.com/vapi-outskill	Build & deploy AI-powered voice agents.
Chronicle HQ	link.outskill.com/chronicle-outskill	AI-powered presentations & decks.
OpenRouter	openrouter.ai	One API, hundreds of AI models from every vendor.
Bolt AI	boltai.com	Desktop UI to chat with multiple models via OpenRouter.
Ollama	ollama.com	Run open-source LLMs locally, no internet needed.
Bolt	link.outskill.com/bolt-outskill	No-code AI website & landing page builder.
v0	v0.dev	Vercel's tool — text prompts → React UI components.
Apify	apify.com	Web scraping & automation platform — MCP compatible.
Goose	block.github.io/goose	Open-source MCP tool for local file management.
Happy Scribe	happyscribe.com	Automatic audio & video transcription.
Comet (Perplexity)	perplexity.ai/comet	Agentic browser — AI that completes web tasks.
Social Sonic	socialsonic.com	Trending news + content idea engine for creators.

SEE YOU IN SESSION 03

You're now a builder.

Session 1 was about understanding. Session 2 was about **building**. Session 3 is the Creator's Playground — diffusion models, AI clones, and multimedia generation at scale.

Until then — go ship a GPT. Go ship a Gem. Get reps in.

OUTSKILL — GENAI MASTERMIND
